

SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	Babeş-Bolyai University
1.2 Faculty	Faculty of Mathematics and Computer Science
1.3 Department	Department of Computer Science
1.4 Field of study	Computer Science
1.5 Study cycle	Bachelor
1.6 Study programme / Qualification	Computer Science

2. Information regarding the discipline

2.1 Name of the discipline		Probability Theory and Statistics					
2.2 Course coordinator		Prof. Sanda Micula, PhD. Habil.					
2.3 Seminar coordinator		Prof. Sanda Micula, PhD. Habil.					
2.4. Year of study	2	2.5 Semester	3	2.6. Type of evaluation	E	2.7 Type of discipline	DF Compulsory
2.8 Course Code	MLE0031						

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	4	Of which: 3.2 course	2	3.3 seminar/laboratory	1 sem + 1 lab
3.4 Total hours in the curriculum	56	Of which: 3.5 course	28	3.6 seminar/laboratory	28
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					25
Additional documentation (in libraries, on electronic platforms, field documentation)					15
Preparation for seminars/labs, homework, papers, portfolios and essays					25
Tutorship					9
Evaluations					20
Other activities:					-
3.7 Total individual study hours			94		
3.8 Total hours per semester			150		
3.9 Number of ECTS credits			6		

4. Prerequisites (if necessary)

4.1. curriculum	<ul style="list-style-type: none"> • Mathematical Analysis • Algebra
4.2. competencies	<ul style="list-style-type: none"> • Logical thinking • Average logical programming skills

5. Conditions (if necessary)

5.1. for the course	<ul style="list-style-type: none"> • Lecture room with large blackboard and video projector
---------------------	--

5.2. for the seminar /lab activities	<ul style="list-style-type: none"> • For seminar: room with large blackboard • For lab: Laboratory with computers having Matlab installed
--------------------------------------	---

6. Specific competencies acquired

Professional competencies	<p>C4.1 Defining basic concepts, theory and mathematical models</p> <p>C4.2 Interpretation of mathematical models</p> <p>C4.3 Identifying the appropriate models and methods for solving real-life problems</p> <p>C4.5 Embedding formal models in applications from various areas</p>
Transversal competencies	<p>CT1 Ability to conform to the requirements of organized and efficient work, to develop a responsible approach towards the academic and scientific fields, in order to make the most of one's own creative potential, while obeying the rules and principles of professional ethic</p> <p>CT3 Using efficient methods and techniques for learning, information, research and developing capabilities for using knowledge, for adapting to a dynamic society and for communicating in Romanian and in a worldwide spoken language</p>

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	<ul style="list-style-type: none"> • Acquire basic knowledge of Probability Theory and Mathematical Statistics, with main focus on applications
7.2 Specific objective of the discipline	<ul style="list-style-type: none"> • Become familiar and be able to work with various probabilistic and statistical models • Ability to perform statistical analysis of data • Ability to use statistical features of various mathematical software

8. Content

8.1 Course	Teaching methods	Remarks
1. Experiments, events, field of events, operations with events. Axiomatic definition of probability. Poincaré's formula. Classical definition of probability.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
2. Conditional probability. Independent events. Total probability formula. Classical probabilistic models (Binomial, Hypergeometric, Poisson, Pascal, Geometric).	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
3. Random variables and random vectors. Discrete random variables. Probability distribution function. Cumulative distribution function. Properties, examples.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
4. Discrete probability laws (Bernoulli, Binomial, Hypergeometric, Poisson, Negative Binomial, Geometric). Discrete random vectors. Operations with discrete random variables.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
5. Continuous random variables. Probability density function. Continuous probability	<ul style="list-style-type: none"> • Interactive exposure 	

laws (Uniform, Normal, Gamma, Exponential, Chi-square, Student, Fisher). Independent random variables. Functions of continuous random variables.	<ul style="list-style-type: none"> • Explanation • Conversation • Didactical demonstration 	
6. Numerical characteristics of random variables. Expectation. Variance and standard deviation. Median. Moments (initial, central, absolute).	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
7. Quantiles. Covariance and correlation coefficient. Inequalities (Markov, Chebyshev). Central limit theorem.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
8. Descriptive statistics. Data collection. Graphical display of data. Frequency distribution, histograms, stem-and-leaf plots. Parameters of a statistical distribution. Measures of central tendency.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
9. Measures of variation. Correlation and regression. Linear regression, least squares estimation.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
10. Statistical inference. Sample theory. Samples. Sample functions (sample mean, sample variance, sample moments). Estimation theory, basic notions. Confidence intervals for estimating the population mean and the population variance.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
11. Confidence intervals for comparing two population means and two population variances. Hypothesis testing, basic notions. Rejection region. Type I errors. Significance testing and P-values.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
12. Tests for the parameters of one population Tests for comparing the parameters of two populations. Examples. Robust tests. Summary of hypothesis testing.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
13. Properties of point estimators. Unbiased and minimum variance estimators. Fisher's information. Absolutely correct estimators. The Rao-Cramer inequality. Efficient estimators. Methods of estimation (method of moments, method of maximum likelihood). Examples.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration 	
14. Type II errors and the power of a test. Most powerful tests and the Neyman-Pearson lemma. Uniformly most powerful tests. Examples.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration

8.2 Seminar	Teaching methods	Remarks
1. Euler's Functions; Properties. Counting, Outcomes, Events.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation 	The seminar is structured as 2 hours per week, every other week
2. Classical Probability; Rules of Probability; Conditional Probability; Independent Events.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Individual and group work 	
3. Probabilistic models.	<ul style="list-style-type: none"> • Interactive exposure • Conversation • Synthesis • Individual and group work 	
4. Discrete random variables and discrete random vectors.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Individual and group work 	
5. Continuous random variables and continuous random vectors.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration • Individual and group work 	
6. Numerical characteristics of random variables.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration • Individual and group work 	
7. Inequalities; Central Limit Theorem; Point Estimators.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Didactical demonstration • Individual and group work 	
8.3 Laboratory	Teaching methods	Remarks
1. Introduction to Matlab.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Individual and group work 	The lab is structured as 2 hours per week, every other week
2. Discrete random variables; Probability distribution function; Command PDF in Matlab.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation 	

	<ul style="list-style-type: none"> • Individual and group work 	
3. Continuous random variables; Probability density function; CDF and Inverse CDF.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Individual and group work 	
4. Numerical characteristics of random variables; Random number generators (command RND in Matlab); Computer simulations of discrete random variables.	<ul style="list-style-type: none"> • Interactive exposure • Synthesis • Conversation • Individual and group work 	
5. Descriptive Statistics; Statistical measures; Correlation and regression; Confidence intervals for means and variances.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Individual and group work 	
6. Hypothesis and significance testing for means and variances.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Individual and group work 	
7. Overview of statistical methods, lab test.	<ul style="list-style-type: none"> • Interactive exposure • Explanation • Conversation • Individual work 	
Bibliography <ol style="list-style-type: none"> 1. Micula, S., Probability and Statistics for Computational Sciences, Cluj University Press, 2009. 2. 9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

<ul style="list-style-type: none"> • The course follows the ACM and IEEE Curriculum Recommendations for Computer Science majors; • The course exists in the studying program of all major universities in Romania and abroad; • The knowledge and skills acquired in this course give students a foundation for launching a career in scientific research; • The statistical analysis abilities acquired in this course are useful in any career path students may choose.
--

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	- acquire the basic principles in Probability	Written exam	60%

	Theory and Mathematical Statistics; - be able to apply correctly the course concepts on various applications - problem solving		
10.5 Seminar activities	- be able to apply course concepts and techniques on practical problems - be able to choose and apply the right probabilistic or statistical model to various practical problems - problem solving	- participation in discussing and solving problems throughout the semester - additional documentation - individual presentation of solutions - solving bonus problems	15%
10.6 Lab activities	- be able to implement course concepts and algorithms in Matlab - be able to solve numerical statistical problems in Matlab	- participation in discussing and solving problems throughout the semester - lab test (numerical statistical applications)	25%
10.7 Minimum performance standards			
➤ A grade of 5 or above (on a scale from 1 to 10) on each of the three activities mentioned above (written test, seminar evaluation, lab evaluation)			

Date

23.04.2024

Signature of course coordinator

Prof. Sanda Micula, PhD. Habil.

Signature of seminar coordinator

Prof. Sanda Micula, PhD. Habil.

Date of approval

Signature of the head of department

Prof. dr. Mărcuș Andrei
