SYLLABUS

1. Information regarding the programme

1.1 Higher education	Babes-Bolyai University
institution	
1.2 Faculty	Faculty of Mathematics and Computer Science
1.3 Department	Department of Computer Science
1.4 Field of study	Computer Science
1.5 Study cycle	Bachelor
1.6 Study programme /	Computer Science (in English)
Qualification	

2. Information regarding the discipline

2.1 Name of the discipline Test Design Techniques (Tehnici de testare software)					e software)			
2.2 Course coordinator Lecturer PhD Camelia Chisăliță-Crețu								
2.3 Seminar coordinator Lecturer PhD Camelia Chisăliță-Crețu								
2.4. Year of	3	2.5	6	2.6. Type of C 2.7 Type of Optional				
study		Semester		evaluation		discipline		
2.8 Discipline		MLE5110		•				
Code		MILESTIU						

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	5	Of which: 3.2 course	2	3.3	1 lab +	
				seminar/laboratory	2 project	
3.4 Total hours in the curriculum	60	Of which: 3.5 course	24	3.6	36	
				seminar/laboratory		
Time allotment:						
Learning using manual, course support, bibliography, course notes						
Additional documentation (in libraries, on electronic platforms, field documentation)					15	
Preparation for seminars/labs, homework, papers, portfolios and essays					25	
Tutorship					6	
Evaluations					4	
Other activities:					-	
0 = m 11 11 11 1 1 1					1	

3.7 Total individual study hours	65
3.8 Total hours per semester	125
3.9 Number of ECTS credits	5

4. Prerequisites (if necessary)

4.1. curriculum	 OOP, Programming Fundamentals, Advanced Programming Methods
4.2. competencies	• Good programming skills in at least one of the programming languages Java, C#

5. Conditions (if necessary)

5.1. for the course	 Course hall with projector
5.2. for the seminar /lab	 Laboratory: computers and use of a programming language
activities	environment

6. Specific competencies acquired

	C2.1 Identify adequate software systems development methodologies
Professional	• C1.2 Identify and explain specific test design techniques that correspond to a testing
	level.
competencies	• C1.3 Source code and goal oriented test elaboration in a well-known programming
	language.
	• C4.3 Identify models and methods adequate to real life problem solving.
Transversal	• CT1 Apply rules to organized and efficient work, responsibilities of didactical and
competencies	scientific activities and creative capitalization of own potential, while respecting
	principles and rules for professional ethics.
	• CT3 Use efficient methods and techniques for learning, knowledge gaining, and
	research and develop capabilities for capitalization of knowledge, accommodation to
	society requirements and communication in English.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	 Enhance the students understanding of testing and test design techniques. Provide the students with an environment in which they can explore the usage and usefulness of software testing and test design concepts in various business scenarios. Induce a realistic and industry driven view of software testing concepts and their inherent benefits.
7.2 Specific objective of the discipline	 Give students the ability to explore various test design techniques applied to different levels of testing. Improve the students' abilities to tackle on goal driven testing. Enhance the students understanding of test design techniques value in business. Students will be able to use various tools for the testing process (i.e., test management, test running, test reporting and bug reporting). Students will be able to design test cases according to an established testing goal and using specific test design technique in order to investigate the software.

8. Content

8.1 Course	Teaching methods	Remarks
 Software Testing. Test Design Techniques Software Testing. Goals. Scope Test Design Technique. Attributes Taxonomy of Test Design Techniques 	 Interactive exposure Explanation. Conversation Didactical demonstration 	
2. Coverage-based Techniques I 2.1. Focus. Objectives 2.2. Tours. Logical Expressions	 Interactive exposure Explanation. Conversation Didactical demonstration 	
3.1. Specification-based Testing; 3.2. Requirements-based Testing;	 Interactive exposure Explanation. Conversation Didactical demonstration 	
4. Risk-based Techniques	 Interactive exposure 	

4.1. Focus. Objectives 4.2. Quick-tests. History-based Testing. Usability Testing 4.3. HTSM. Failure modes 5.1. Focus. Objectives 5.2. Guerilla Testing. All-pairs Testing 5.3. Use Cases Testing. Scenario Testing Coverage-based Techniques vs. Activity-based Techniques 6.1. Focus. Objectives 6.2. Function Equivalence Testing. Self-verifying data 6.3. Use Cases Testing. Self-verifying data 6.4. Pocus. Objectives 7.5. Confirmation Testing. User Acceptance Testing 7.5. Desired result-based Techniques vs. Evaluation-based Techniques 8. Tester-based Techniques vs. Evaluation-based Techniques 8. Li Focus. Objectives 9. Lester-based Techniques vs. Evaluation-based Techniques 9. Tester-based Techniques vs. Evaluation-based Techniques 9. Test Design Techniques vs. Activity-based Techniques 9. Test Design Techniques vs. Activity-based Techniques 9. Li Focus. Objectives 10. Security Testing 10. Focus. Objectives 11. Bug Reporting 11. Challenges 11. Challenges 11. Challenges 11. 8.2 Seminar / laboratory	Teaching methods	Remarks
1. Laboratory 1	Presentation, Conversation, Problematizations,	
Testing Project Setup	Discovery, Other	
	methods – individual study, exercises	
2. Laboratory 2	Presentation, Conversation, Problematizations,	
Coverage-based Techniques	Discovery, Other	
	methods – individual study, exercises	
3. Laboratory 3	Presentation, Conversation, Problematizations,	
Risk-based Techniques	Discovery, Other	
1	methods – individual study, exercises	
4. Laboratory 4	Presentation, Conversation, Problematizations,	
Test Automation Tools	Discovery, Other	
	methods – individual study, exercises	
5. Laboratory 5	Presentation, Conversation, Problematizations,	
Activity-based Techniques OR	Discovery, Other	
Desired result-based Techniques	methods – individual study, exercises	
6. Laboratory 6	Evaluation	
Project turn-in

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- Students will know how to apply test design techniques for a software product, in a similar way they are used in industry.
- Students will be able to understand the differences between the goals and scope of the various test techniques applied to a software system.

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	Design and develop a testing solution (project) for a software product with focus on test design techniques. The corresponding grade is denoted by P .	Oral Examination	70%
10.5 Seminar/laboratory activities	Each lab activity will be graded. The arithmetic average of the grades is denoted by L.	Laboratory Activity	30%

Remark:

- Laboratory assignments will pe achieved in groups of 2-3 students.
- Testing project will pe achieved in groups of 4-5 students.

10.6 Minimum performance standards

- Students will be able to apply test design techniques according to established goals for a software system.
- Students will be able to unstandard the differences between software testing goal, scope, and test design technique concepts.
- The final grade (M) is computed as follows: M = 30%L + 70%P.
- At least $M \ge 5.00$ is favourable to pass this course exam.
