SYLLABUS

1. Information regarding the programme

1.1 Higher education	Babeş-Bolyai University Cluj-Napoca
institution	
1.2 Faculty	Faculty of Mathematics and Computer Science
1.3 Department	Department of Mathematics
1.4 Field of study	Mathematics
1.5 Study cycle	Master
1.6 Study programme /	Advanced Mathematics
Qualification	

2. Information regarding the discipline

2.1 Name of the dis	of the discipline (en)			Geometric Function Theory in Several Complex Variables				
(ro)			Te	Teoria geometrică a funcțiilor de mai multe variabile				
			complexe					
2.2 Course coordinator			Pro	Prof.PhD. Mirela KOHR				
2.3 Seminar coordinator			Pro	Prof.PhD. Mirela KOHR				
2.4. Year of study	2	2.5 Semester	4 2.6. Type of E 2.7 Type of discipline DS/Optiona evaluation			DS/Optional		
2.8 Code of the discipline		MME3115						

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3	1 sem
				seminar/laboratory	
3.4 Total hours in the curriculum	36	Of which: 3.5 course	24	3.6	12
				seminar/laboratory	
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					45
Additional documentation (in libraries, on electronic platforms, field documentation)					45
Preparation for seminars/labs, homework, papers, portfolios and essays				45	
Tutorship					34
Evaluations					20
Other activities:				-	
2.7 Total in dividual atudy haven		100			1

3.7 Total individual study hours	189
3.8 Total hours per semester	225
3.9 Number of ECTS credits	9

4. Prerequisites (if necessary)

4.1. curriculum	•	Complex analysis; Real analysis; Topology; Partial differential equations
4.2. competencies	•	The are useful logical thinking and mathematical notions and results from the above mentioned fields

5. Conditions (if necessary)

5.1. for the course	 Classroom with blackboard/video projector
5.2. for the seminar /lab	Classroom with blackboard/video projector
activities	

6. Specific competencies acquired

o. Spec	THE C	ompetencies acquired
Professional competencies	•	Ability to understand and manipulate concepts, individual results and advanced mathematical theories. Ability to use scientific language and to write scientific reports and papers.
	•	Ability to inform themselves, to work independently or in a team in order to carry out studies and to solve complex problems.
Transversal competencies	•	Ability to use advanced and complementary knowledge in order to obtain a PhD in Pure Mathematics, Applied Mathematics, or in other fields that use concepts of complex analysis.
Trans	•	Ability for continuous self-perfecting and study.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	 Knowledge, understanding and use of main concepts and results of geometric function theory of several complex variables. Knowledge, understanding and use of methods of complex analysis in one or higher dimensions in the study of special problems in pure and applied mathematics. Ability to use and apply concepts and fundamental results of advanced mathematics in the study of specific problems of function theory in Cⁿ.
7.2 Specific objective of the discipline	 Acquiring basic and advanced knowledge in geometric function theory in Cⁿ. Understanding of main concepts and results in the theory of holomorphic mappings on the unit ball in Cⁿ. Knowledge, understanding and use of advanced topics in mathematics in the study of special problems in several complex variables. Ability student involvement in scientific research.

8. Content

8.1 Course	Teaching methods	Remarks
1. The Carathéodory family <i>M</i> of holomorphic	Lectures, modeling,	
mappings in several complex variables. Growth	didactical demonstration,	
and distortion results, coefficient bounds.	conversation. Presentation	
Compactness of the family <i>M</i> .	of alternative explanations.	
2. Starlike mappings on the unit ball in \mathbb{C}^n . Necessary	Lectures, modeling,	
and sufficient conditions for starlikeness. Growth	didactical demonstration,	
and distortion results and coefficient bounds.	conversation. Presentation	
	of alternative explanations.	
3. Convex mappings on the unit ball in \mathbb{C}^n . Necessary	Lectures, modeling,	
and sufficient conditions for convexity on the	didactical demonstration,	
Euclidean unit ball and the unit polydisc in \mathbb{C}^n .	conversation. Presentation	
	of alternative explanations.	
4. Growth, distortion and coefficient bounds for	Lectures, modeling,	
convex mappings on the unit ball in \mathbb{C}^n .	didactical demonstration,	
	conversation. Presentation	

		of alternative explanations.	
5.	Loewner chains and transition mappings (evolution	Lectures, modeling,	
	families) in \mathbb{C}^n .	didactical demonstration,	
		conversation. Presentation	
		of alternative explanations.	
6.	Loewner chains, Herglotz vector fields and the	Lectures, modeling,	
	generalized Loewner differential equation in \mathbb{C}^n .	didactical demonstration,	
		conversation. Presentation	
		of alternative explanations.	
7.	Kernel convergence and biholomorphic	Lectures, modeling,	
	mappings on the unit ball in \mathbb{C}^n . Applications	didactical demonstration,	
	in the theory of Loewner chains.	conversation. Presentation	
		of alternative explanations.	
8.	The solutions of the generalized Loewner	Lectures, modeling,	
	differential equation in \mathbb{C}^n .	didactical demonstration,	
		conversation. Presentation	
		of alternative explanations.	
9.	The family S ⁰ (B ⁿ) of biholomorphic mappings with	Lectures, modeling,	
	parametric representation on the unit ball in \mathbb{C}^n .	didactical demonstration,	
	Characterizations in terms of Loewner chains.	conversation. Presentation	
	Compactness of the family $S^0(B^n)$. The Runge	of alternative explanations.	
1.0	property. Open problems.		
10.	Extreme points and support points associated with	Lectures, modeling,	
	the family $S^0(B^n)$. Approximation properties by	didactical demonstration,	
	automorphisms of the space C ⁿ . Open problems	conversation. Presentation	
	and conjectures.	of alternative explanations.	
11.	Univalence criteria on the unit ball in C ⁿ via	Lectures, modeling,	
	the theory of Loewner chains. Parametric	didactical demonstration,	
	representation and asymptotic starlikeness in	conversation. Presentation	
	higher dimensions.	of alternative explanations.	
12.	Extension operators that preserve analytic and	Lectures, modeling,	
	geometric properties (starlikeness, convexity,	didactical demonstration,	
	Loewner chains, parametric representation).	conversation. Presentation	
	Open problems, conjectures, and research	of alternative explanations.	
	directions.

8.2 Seminar	Teaching methods	Remarks
1. Examples of mappings in the Carathéodory family	Applications of course	1 hour/week
M. Special subclasses of M. Distortion and	concepts. Description of	
coefficient bounds.	arguments and proofs for	
***************************************	solving problems.	
	Homework assignments.	
	Direct answers to students.	
2. Sufficient conditions of starlikeness on the unit	Applications of course	
ball in C ⁿ . Examples of starlike mappings.	concepts. Description of	
but in C. Examples of startike mappings.	arguments and proofs for	
	solving problems.	
	Homework assignments.	
	Direct answers to students.	
3. Sufficient conditions of convexity on the unit	Applications of course	
ball in C ⁿ . Examples of convex mappings.	concepts. Description of	
The state of the s	arguments and proofs for	
	solving problems.	
	Homework assignments.	
	Direct answers to students.	
4. Starlike mappings of order α on the Euclidean	Applications of course	
unit ball in \mathbb{C}^n , $0 \le \alpha < 1$. Growth and coefficient	concepts. Description of	
bounds. Examples.	arguments and proofs for	
1	solving problems.	
	Homework assignments.	
	Direct answers to students.	
5. Loewner chains and transition mappings (evolution	Applications of course	
families) in several complex variables. Examples.	concepts. Description of	
	arguments and proofs for	
	solving problems.	
	Homework assignments.	
	Direct answers to students.	
6. Loewner chains and the associated Loewer	Applications of course	
PDE in higher dimensions. Applications.	concepts. Description of	
	arguments and proofs for	
	solving problems.	
	Homework assignments.	
7. The analytical elementaries:	Direct answers to students.	
7. The analytical characterizations of starlikeness	Applications of course concepts. Description of	
and spirallikeness of type α on the unit ball in	arguments and proofs for	
C ⁿ in terms of Loewner chains.	solving problems.	
	Homework assignments.	
	Direct answers to students.	
8. Variation of Loewner chains in C ⁿ .	Applications of course	
Applications to extremal problems for	concepts. Description of	
univalent mappings with parametric	arguments and proofs for	
	solving problems.	
representation on the unit ball in \mathbb{C}^n .	Homework assignments.	
	Direct answers to students.	
9. Bounded mappings with parametric representation	Applications of course	
- the production of the produc	concepts. Description of	
	concepts. Description of	I

on the unit ball in \mathbb{C}^n . Growth and coefficient bounds. Applications to extremal problems.	arguments and proofs for solving problems. Homework assignments. Direct answers to students.
10. Univalence criteria on the unit ball in C ⁿ via the theory of Loewner chains.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.
11. Kernel convergence and Loewner chains in C ⁿ .	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.
12. Extension operators that preserve analytic and geometric properties. Open problems, conjectures, and research directions.	Applications of course concepts. Description of arguments and proofs for solving problems. Homework assignments. Direct answers to students.

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

The content of this discipline is in accordance with the curricula of the most important universities in

Romania and abroad, where the advanced mathematics plays an essential role. This discipline is useful in specifical PhD research activities and in preparing future researchers in pure and applied mathematics.

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	Knowledge of concepts and basic results	Written exam.	60%
	Ability to justify by proofs theoretical results		
10.5 Seminar/lab activities	Ability to apply concepts and results acquired in the course in the study of advanced topics of geometric function theory in C ⁿ and related area.	Evaluation of reports and homework during the semester, and active participation in the seminar activity. A midterm written test.	15% 25%
	There are valid the official rules of the faculty concerning the attendance of students to teaching activities.		
10.6 Minimum performance standards			
> The final grade should be at least 5 (from a scale of 1 to 10).
