

QA Internship @ HP

Server Automation

This summer, be part of the Server Automation Quality Assurance team, see what it takes to be a successful engineer and learn hands on the basics of software testing in an enterprise application. You will add your contribution to the validation of our product, while working with local and remote R&D and QA teams, using specialized testing tools in an agile environment.

What we offer:

- Work in a young and motivated QA group (20 engineers)
- Expertise in software testing, networking, different operating systems
- Trainings and responsibilities as for any other engineer in the team
- Paid internship, from July 2nd until September 14th.

What we need:

- Linux and networking knowledge, troubleshooting on most common issues
- Experience with system/network administration or different OS (Windows, Linux, Solaris)
- Quick learner, good communication skills and able to work without supervision
- Personal interest in pursuing a career in software testing.

To apply send your CV to internshipcluj@hp.com until April 22nd 2012.
Please use "HP Internship 2012" as email subject.
